

**Abstract**

An infusion package, particularly for coffee, has a container part (12)  
5 ~~—and a support (14) for the container part.—The container part (12) defines two~~  
compartments (36, 38) which contains similar amounts of coffee. In one form  
each end portion of the support (14) has crease lines which facilitate opening  
of the package for use. Also disclosed is an apparatus and method for making  
the package.
